Need to replace a tap washer? Plumbing expert Steve will show you how to in 7 simple steps. We stock all the items you'll need. Pay one of our stores a visit today and our team will gladly assist you.

## INSTALLATION GUIDE

1 First things first, switch the water off at the mains.

2 Using a knife or multi-tool remove the hot/cold indicator. Next, locate the screw in the tap head, unscrew and remove it.

### What you will need:

- Knife or multi-tool
- Wrench shifter
- Star or flat screwdriver (based on tap)
- Water pump pliers
- Fibre washers
- Tap washers

### Chamberlain's DIY tip!

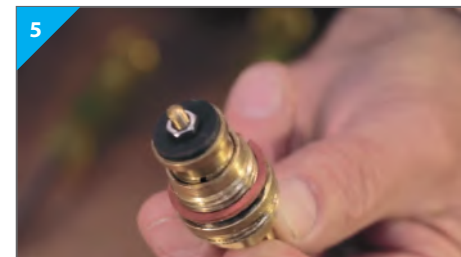

Before you start, place the plug in the sink. This will stop things falling down the drain!

3 Once loose, remove the sleeve from the tap's body.

4 Pick up your wrench shifter, grab hold of the tap and begin to loosen the fitting.

5 Remove the body from the tap. Inspect the fibre washer around the body for any damage.

6 To remove the tap washer, take your shifter and undo the nut on the tap spindle. Using your knife/multi-tool, remove the old washer, replace with the new one and reattach the nut on the spindle.

7 Once tightened, place the tap body back into the tap. Retrace your earlier steps to reassemble the tap. Job done!
